
**Centre de Recherche en Myologie
Institute of Myology**
Paris, France

Postdoctoral position available (September 2019)

The team “Repeat Expansions & Myotonic Dystrophy” led by D. Furling at the “Centre de Recherche en Myologie, UMR974” (Sorbonne Université, Inserm) located within the “Institute of Myology” in Paris (France) opens a postdoctoral research scientist position in the area of skeletal muscle biology. Research topics of the team are focused on Myotonic Dystrophy type 1 (DM1) and follow two complementary directions, pathophysiology and biotherapy for this RNA dominant neuromuscular disease caused by expanded microsatellite repeats.

Qualifications: Candidates should have a PhD in biology or biological sciences, with/without post-doc experience. Expertise in cellular and molecular biology is required. In addition, an experience working in skeletal muscle biology (especially *in vivo*) would be a plus for this project.

Terms and conditions: the salary will be according to the guidelines of the Inserm status, depending on experience. The position will be for 3 years but renewed according to progress.

Application details: Candidates should send their application including 1) a CV, 2) a cover letter highlighting previous scientific contributions and skills, 3) list of publications and communications, 4) at least 2 reference contacts.
